Kresilo

The creative environment where inspiration becomes the project.

PITCH DECK · 2026

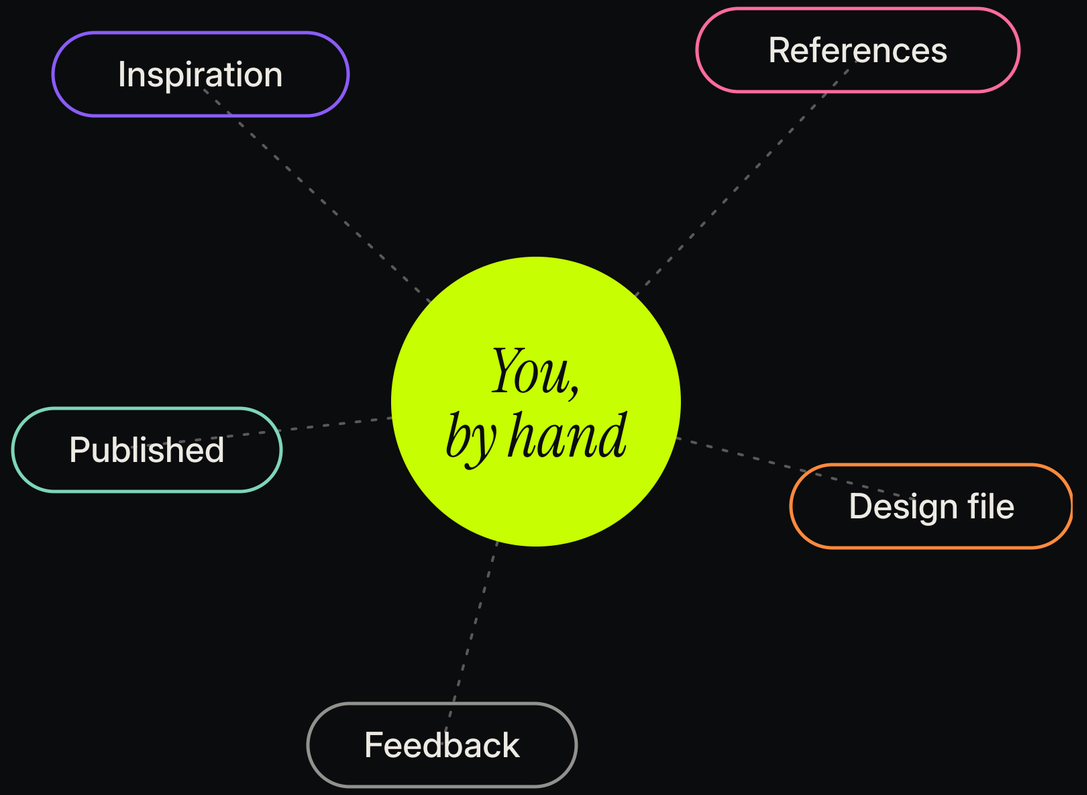

JOSHUA, FOUNDER & CEO · PUJAN, CO-FOUNDER & CTO

A16Z SPEEDRUN SR008

THE PROBLEM

Creative work moves forward. The reasoning gets left behind.

Creators have become the human API, carrying context between tools by hand.

Inspiration loses its context

A saved reference forgets where it came from and why it mattered.

Work crosses many tools

Every handoff drops the intent behind the decision.

The reasoning never travels

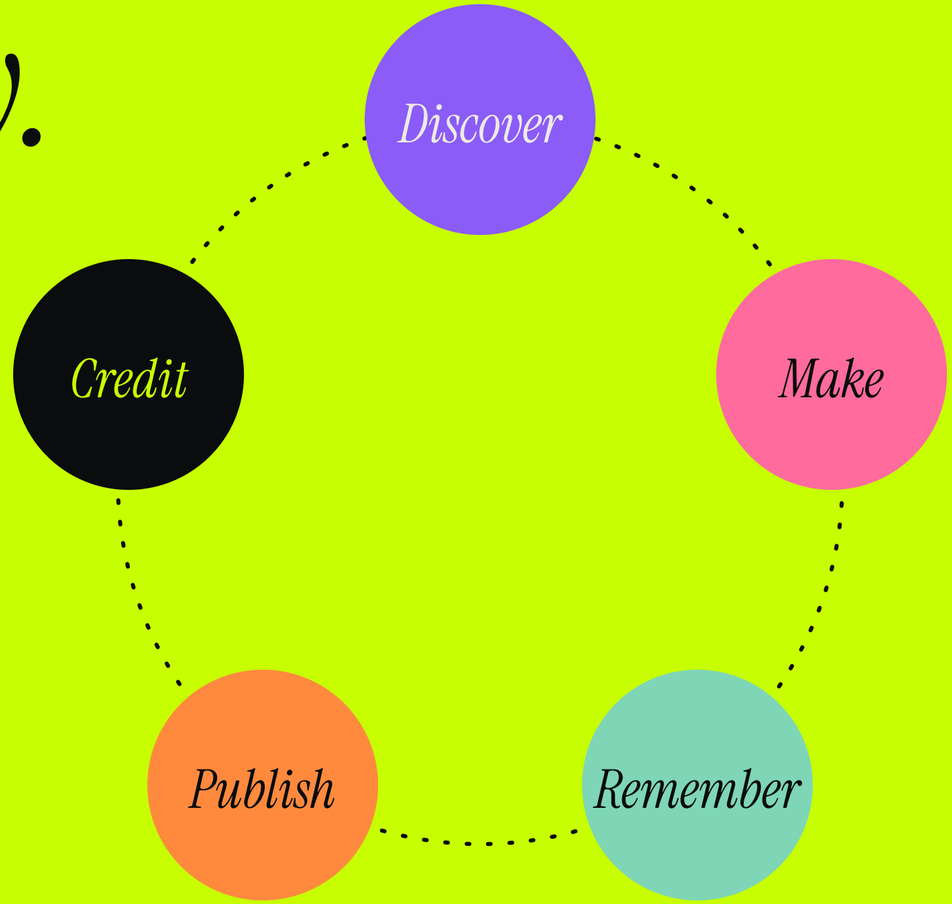

Files move forward. The why stays behind in someone's head.

FIRST HAND: JOSHUA RAN A CRYPTO AGENCY AND WATCHED THIS HAPPEN IN EVERY PROJECT

THE IDEA

Culture feeds creativity. Creativity produces culture.

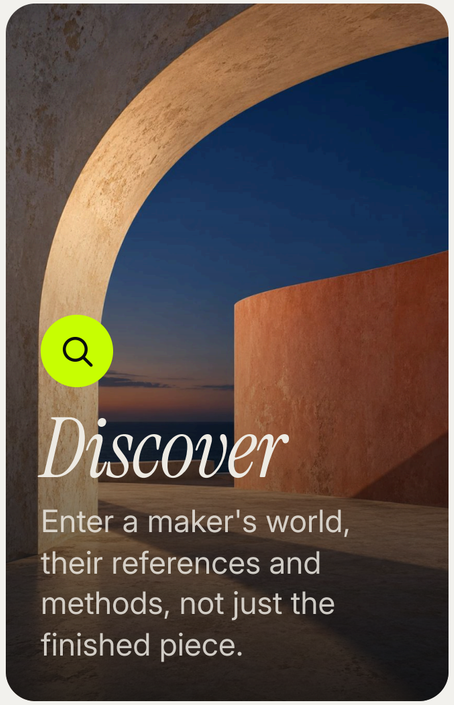

Kresilo connects them.

A social network and creative studio, built as one continuous world: discovery, thought, making, memory and cultural exchange.

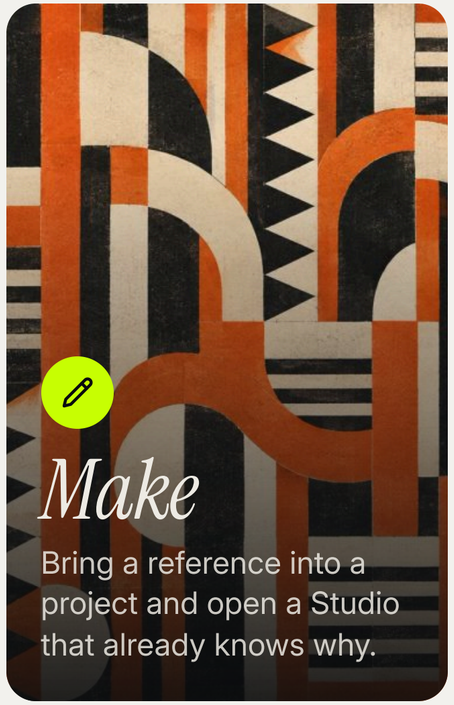

WHAT IT EMPOWERS PEOPLE TO DO

Develop how you see, not just what you make.

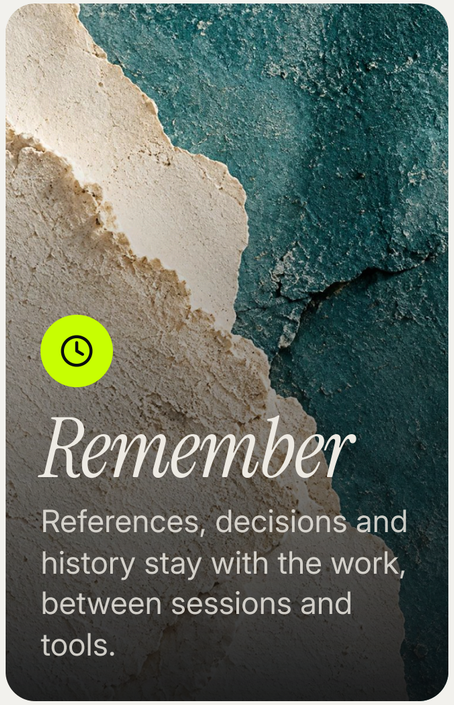

Discover

Enter a maker's world, their references and methods, not just the finished piece.

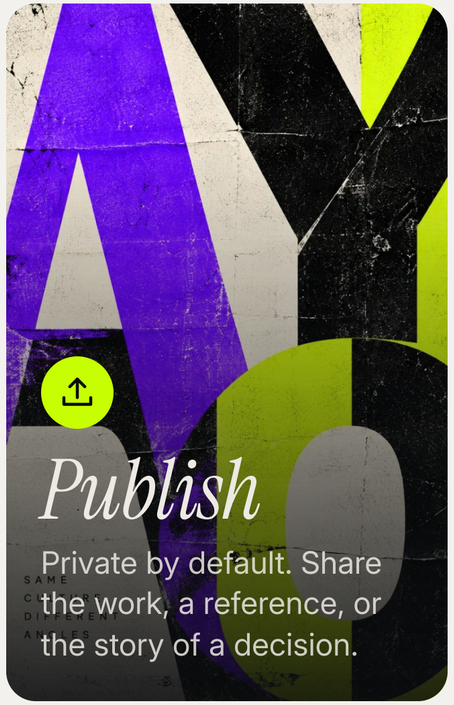

Make

Bring a reference into a project and open a Studio that already knows why.

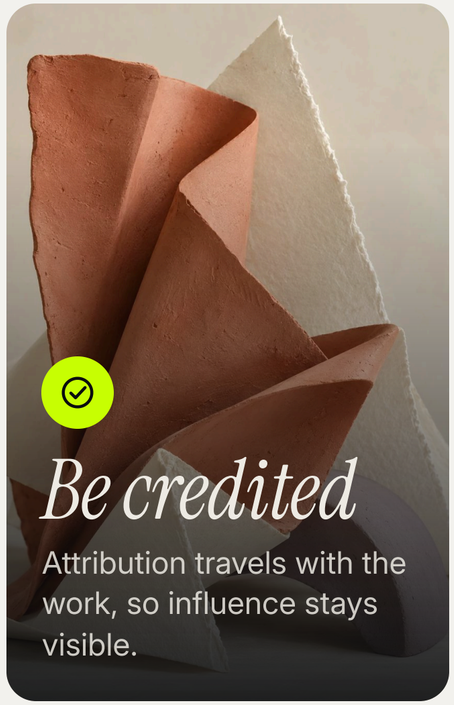

Remember

References, decisions and history stay with the work, between sessions and tools.

Publish

Private by default. Share the work, a reference, or the story of a decision.

Be credited

Attribution travels with the work, so influence stays visible.

THE STUDIO

One place that remembers the project.

Intent, references, decisions

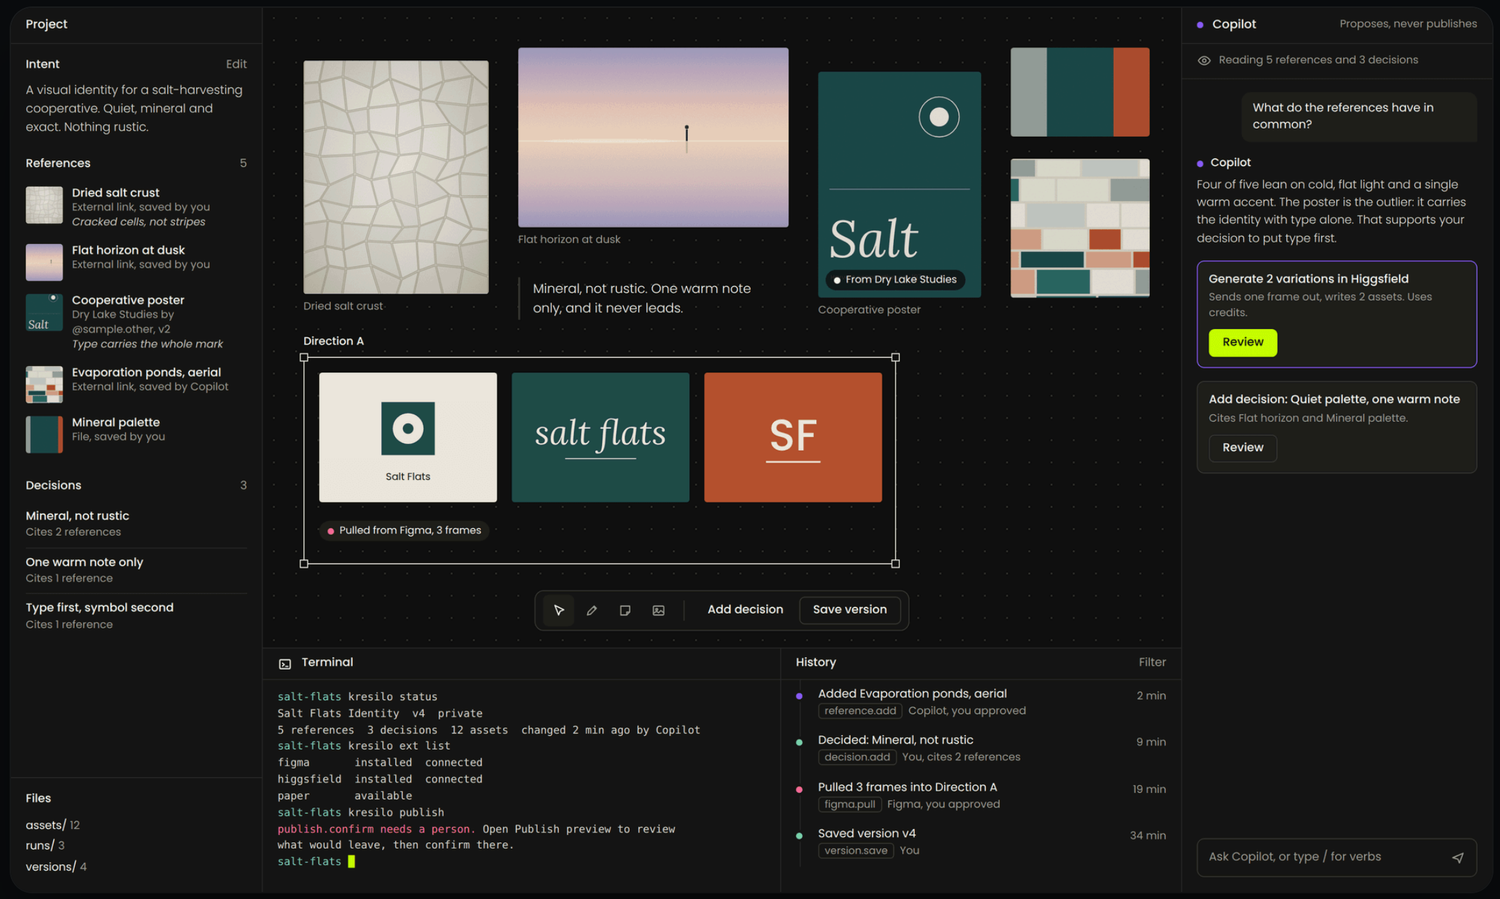

Every reference keeps its source and why you saved it.

Copilot, terminal, extensions

Four doors, one command layer. Figma, Higgsfield and Paper to start, on your own accounts.

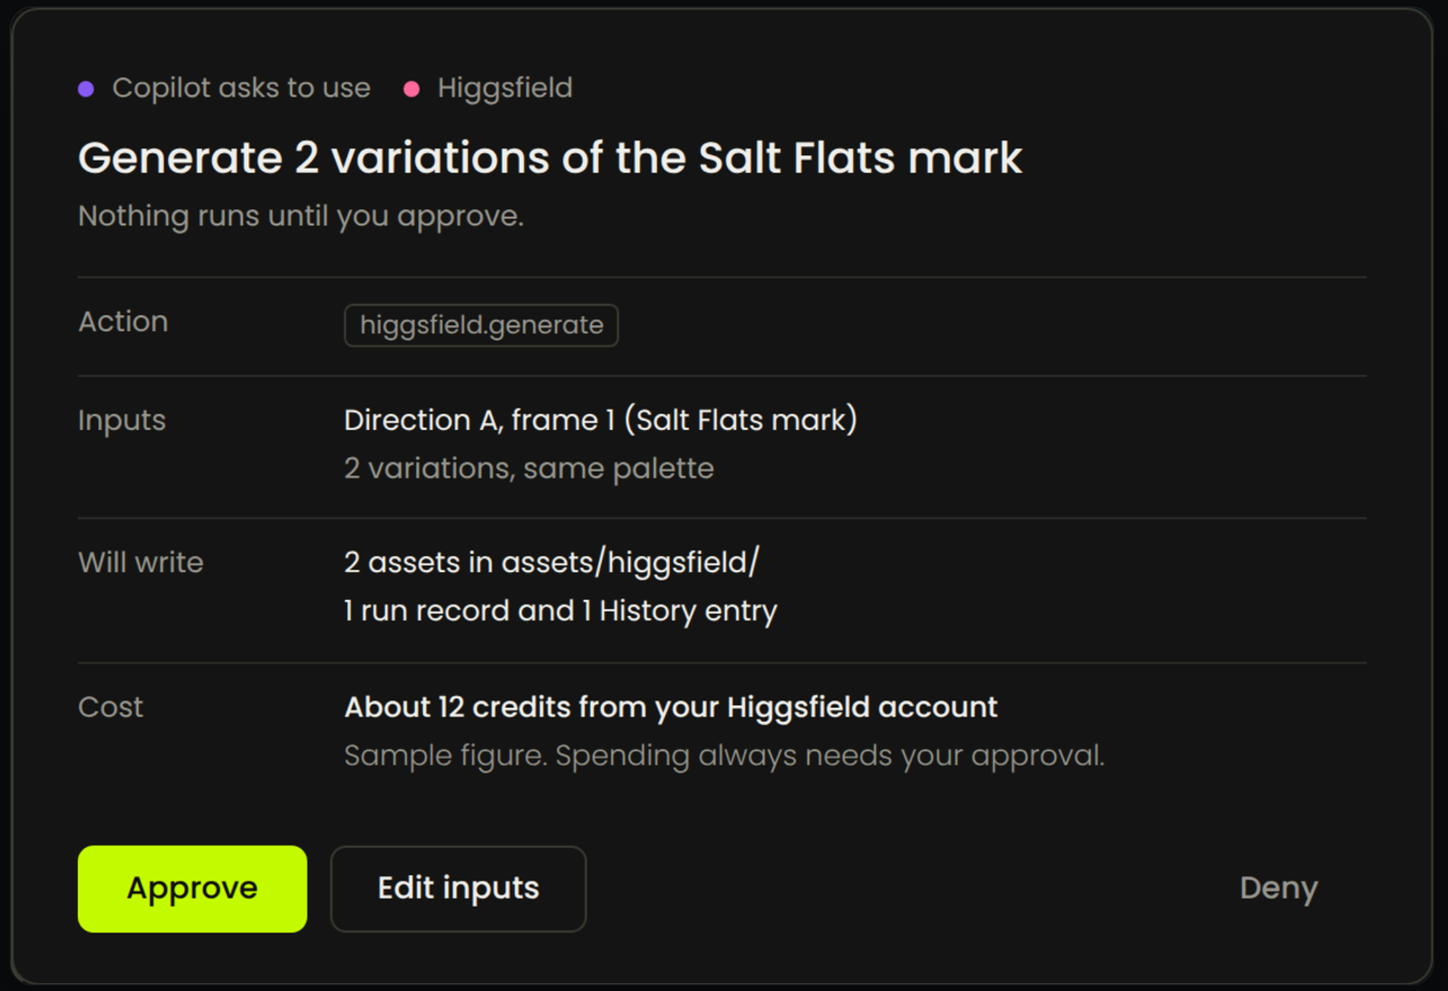

History of every change

Who did it, what it cited, and when.

Canvas · Copilot · Terminal · Extensions · Versions

WORKING PROTOTYPE: HOME FEED, DISCOVER, MAKERS, STUDIO CANVAS AND LAYERS, APPROVE OR DECLINE EVERY AI CHANGE, VERSION HISTORY, PUBLISH

THE TRUST POINT

AI proposes. You approve.

Nothing runs until you say so

Every change an agent makes waits for your approval and stays in the project's history.

Your accounts, your credits

Reads are free. Writes and spending always come to you as a card.

PUBLISH AND CREDIT

Private until you say so.

You choose the layers

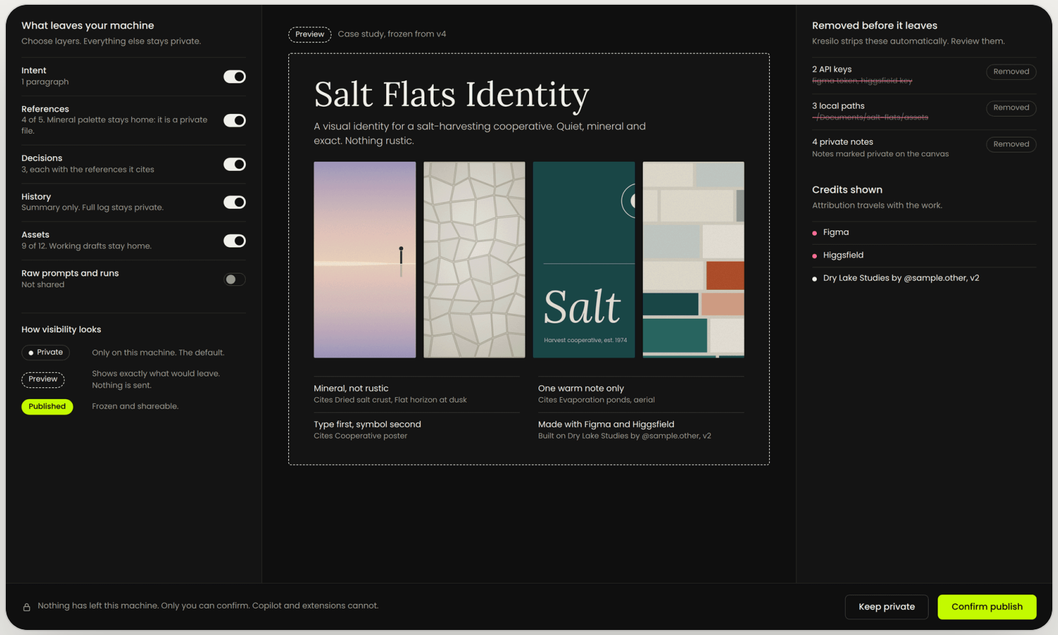

Intent, references, decisions, history, assets. Everything else stays private.

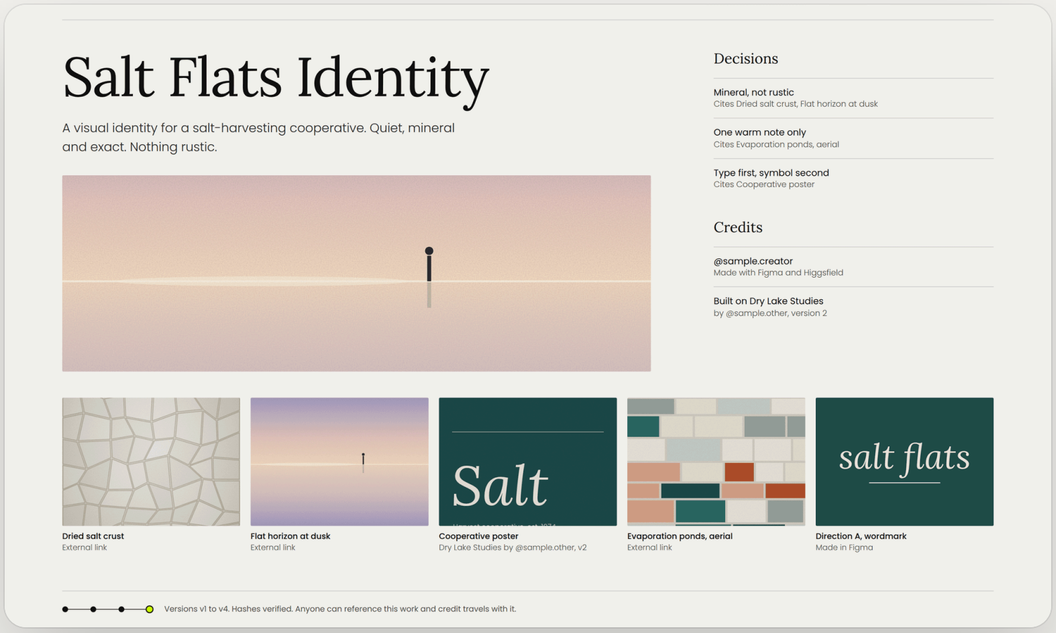

Keys and paths never leave

API keys, local paths and private notes are stripped before anything leaves.

Credit travels with it

Tools, collaborators and the work you built on are named.

ONLY YOU CAN CONFIRM A PUBLISH. COPILOT AND EXTENSIONS CANNOT.

WHY NOW

The places creators borrowed stopped working for makers.

01

Borrowed homes punished making.

Instagram punishes anything that doesn't perform. X rewards arguing more than making.

02

One person, every tool.

The same creator now designs, edits, writes and publishes, each in a different app. Every handoff drops the reasoning behind the work.

03

Tools can finally connect.

Tools increasingly open up to outside connection. One project can sit across your own accounts, with nothing bundled or sold as a step.

WHERE KRESILO SITS

Everyone else owns a step.

Kresilo owns the loop.

KIND	EXAMPLES	WHY THEY WON'T CONNECT IT
Portfolios	Dribbble	Show the finish, not the thinking.
CVs	Behance	A record you show, not a place you return to.
Borrowed homes and stages	Instagram, X	Punish what doesn't perform. Reward arguing more than making.
Collectors	Are.na, Pinterest	Built to collect. What you make never flows back.
Design tools	Figma, Photoshop	Built around the file. Memory stops at the file.
AI assistants and suites	ChatGPT, Claude, Krea	Context lives in threads. Bundled access is the business model.
Kresilo		**One project. Your accounts. Your tools. Sells no step, so it can connect all of them.**

Start focused. Grow through what people make and share.

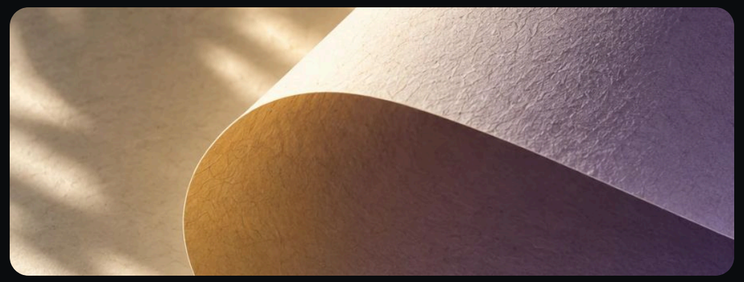

Seed the community

Designers, illustrators, photographers and other visual thinkers who actively share work, references and process.

Make creation the hook

Useful to one creator alone: save a reference, start a project, keep the reasoning. The network adds to that, but it isn't needed on day one.

Grow through contribution

Published work brings new people in. Attribution, remixing and project contributions give creators reasons to return and invite others.

BUSINESS MODEL

Creators pay for the Studio. The rest comes next.

NOW

Studio

SUBSCRIPTION

The project workspace: memory, version history and professional workflows. You connect your own accounts and tools. We don't sell any step.

NEXT

Marketplace

Extensions and creative services built by developers and creatives. Revenue: commission on transactions.

LATER

Creator economy

Designers earn from sessions, workshops, memberships and commissions through their profiles. Revenue: transaction fees.

THE TEAM

Built by people who lived the problem.

Joshua

FOUNDER & CEO

Customer zero. Ran creative production at a crypto agency, and kept hitting the same wall: the work moved forward, the reasoning didn't.

Pujan

CO-FOUNDER & CTO

Ran production systems in legal, healthcare and insurance, where whether an agent can be trusted to act is the whole job.

ADVISORS

Jim Toepel
EX META

Borys Skowron
CEO, BHONG

Chrys Li
AI SYSTEMS DESIGN, 7MODES

Raphael Manachem
EX MICROSOFT

THE ASK

The standard Speedrun deal.

Up to $1M

$500K up front on a SAFE, and $500K in our next round.

WHAT IT BUILDS

Tech platform

The project workspace: memory, version history, and connections to your own accounts and tools.

Community

The first group of designers, illustrators and photographers who share their work and process.

Expansion

The marketplace and creator tools, once the studio is in real use.

Kresilo

Thank you.
